

# **INTERFACES FOR EMBEDDING CFD OPTIMISATION WORKFLOWS INTO THE PRODUCT DEVELOPMENT PROCESS**

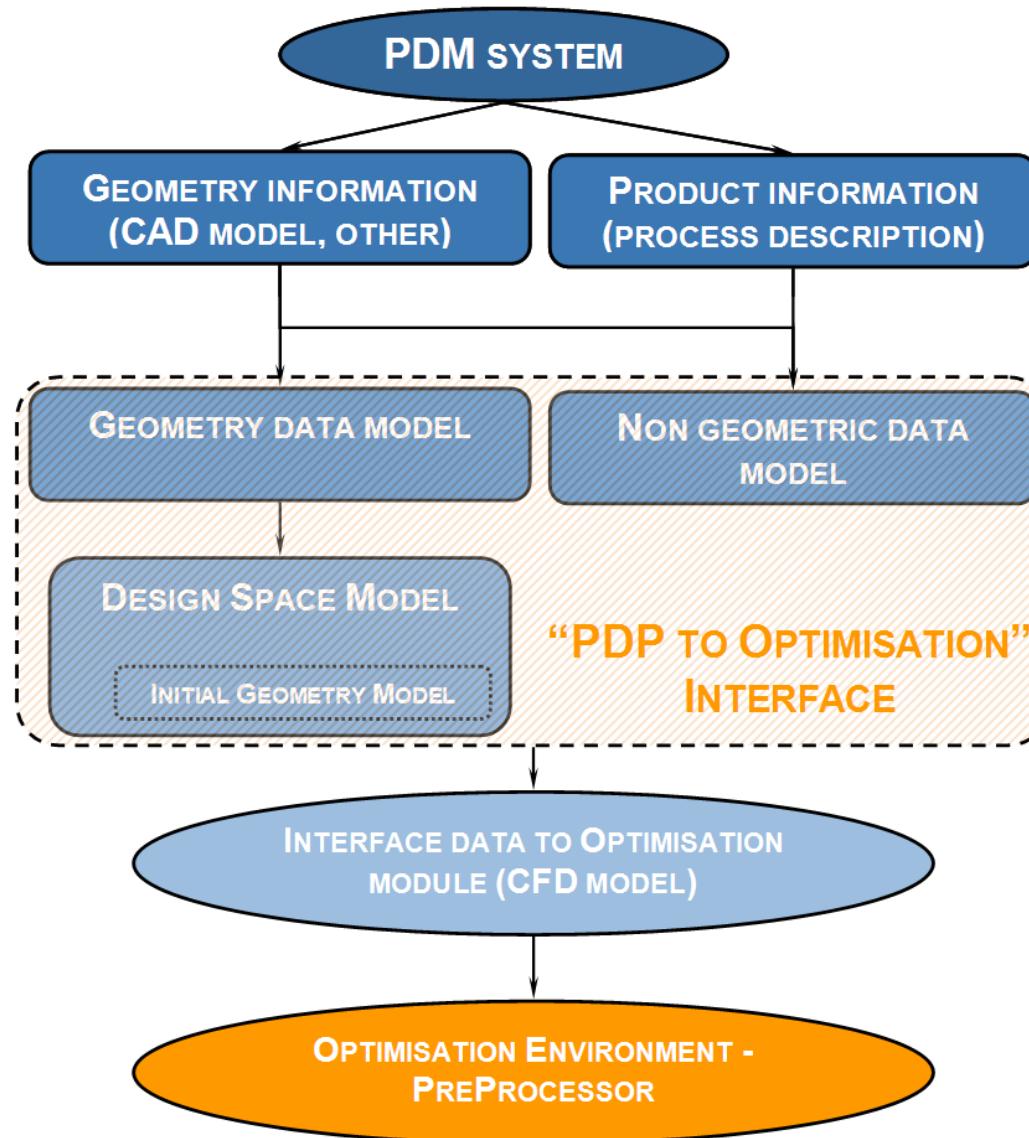

**Todorov, G.; Ovtcharova, J.; Romanov, B. & Kamberov, K.  
Varna September 2010**

# Introduction

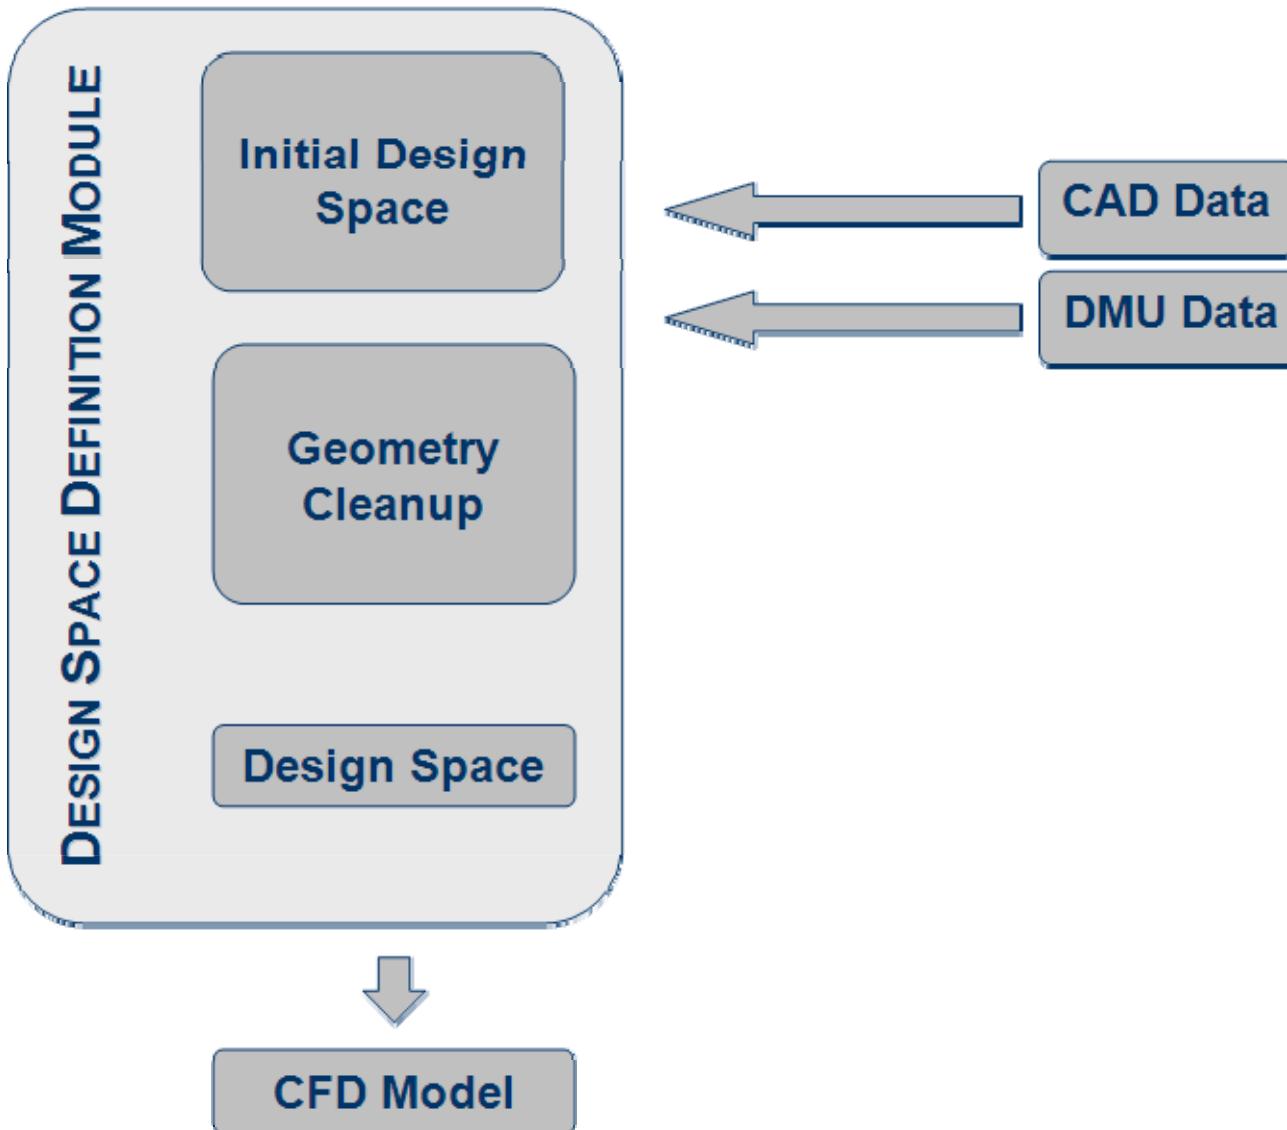

## PDPs and CFD optimisation – embedding of workflows

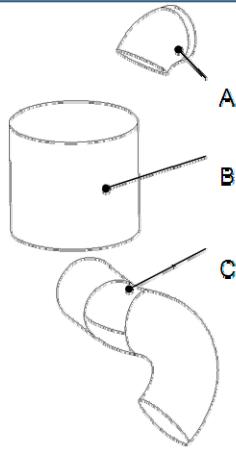

# Interfaces PDP to Optimisation Module

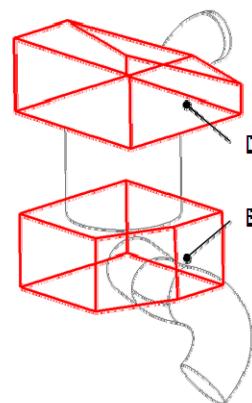

# A conception for process of design space definition

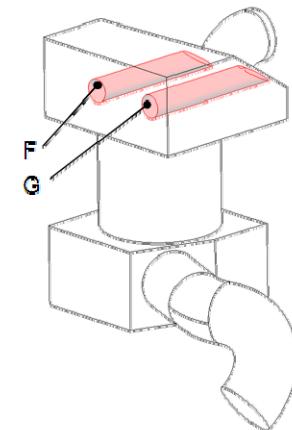

# Demonstration cases

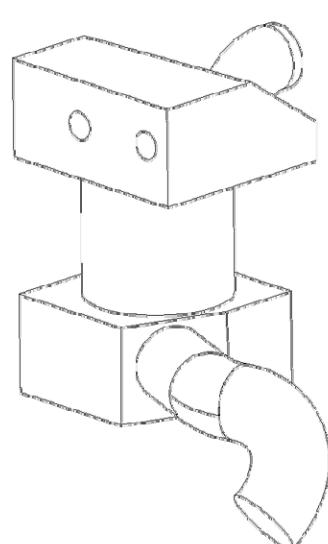

A/ Required functional volumes

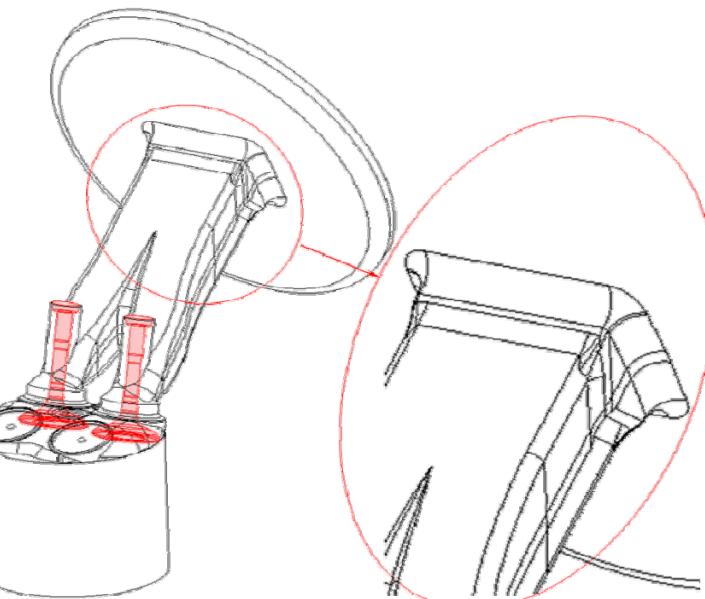

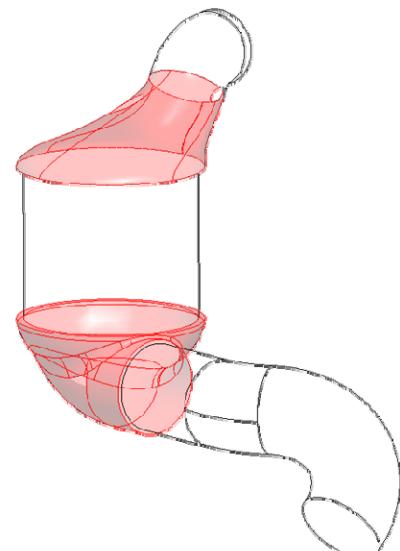

B/ Defined by DMU connection volumes

C/ Subtracted Intersecting parts volumes

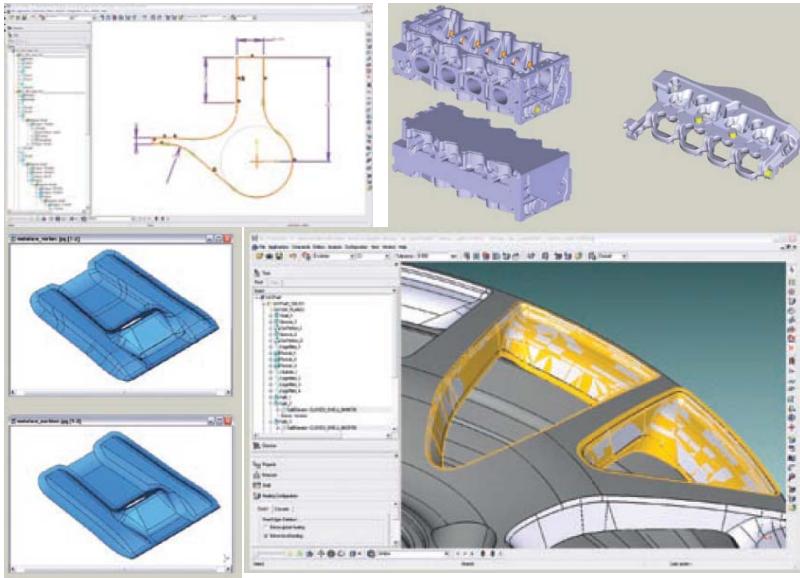

Catalytic converter

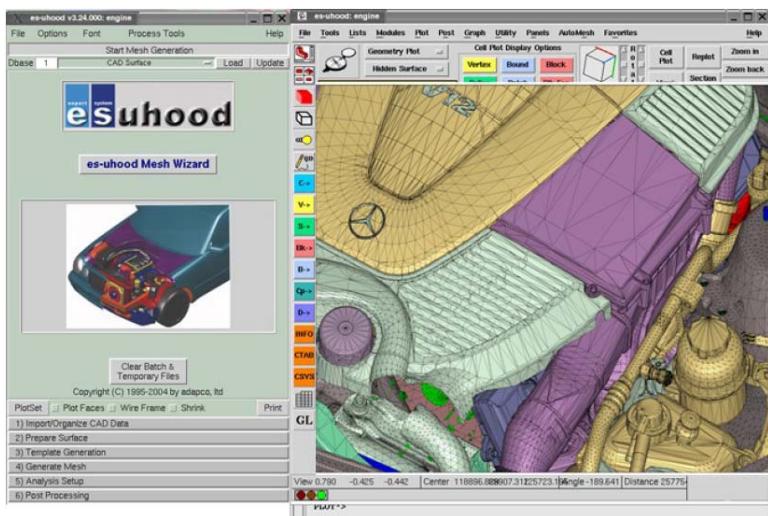

Petrol engine intake port

# Initial design space cleanup using specialized modules

**3D\_Evolution  
(CoreTechnologie):**  
possible feature based, healing  
of gaps and overlapping,  
inner volumes extraction,  
surface wrapping, semi-  
automatic holes/chamfers/etc.  
removing

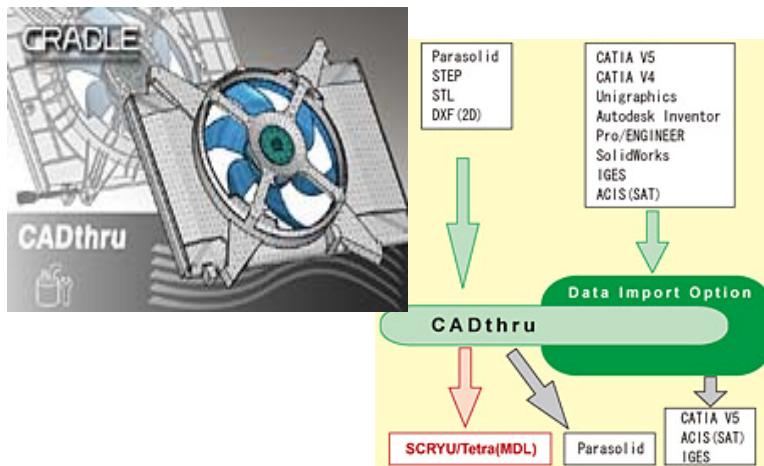

**Expert system wrapper (CD-  
adapco):**  
healing of gaps and  
overlapping, surface  
wrapping, semi-automatic  
holes/chamfers/etc. removing

# Initial design space cleanup using specialized modules

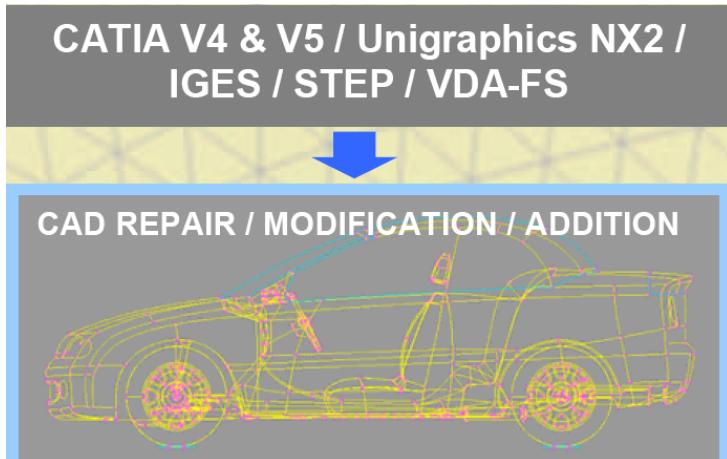

**PowerDELTA & PowerCLAY  
(Exa Corporation):**  
possible feature based, healing  
of gaps and overlapping,  
surface wrapping, semi-  
automatic holes/chamfers/etc.  
removing

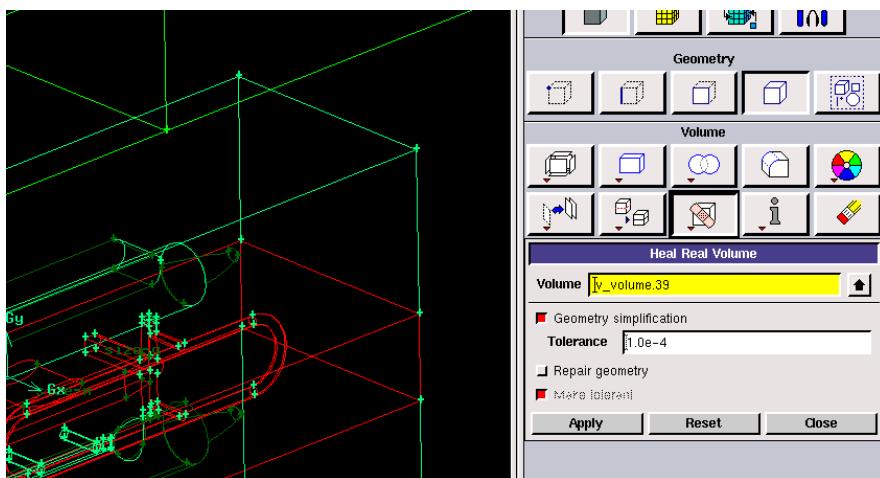

**CADthru (Software Cradle, Co.):**  
healing of gaps and  
overlapping, inner volumes  
extraction, surface wrapping,  
semi-automatic  
holes/chamfers/etc. removing

# Initial design space cleanup using conventional CAE preprocessors

**ANSA (BETA CAE Systems SA):**

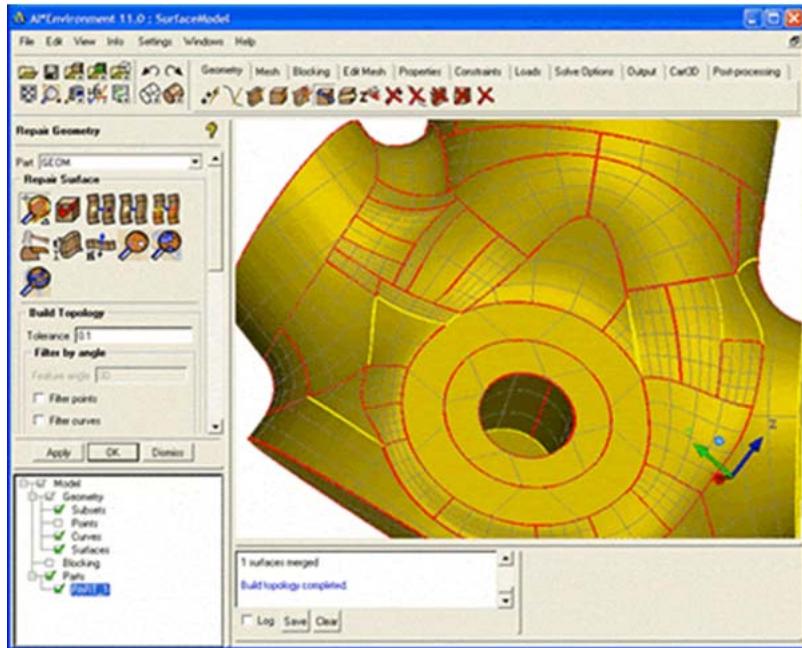

healing of gaps and overlapping, surface wrapping, semi-automatic holes/chamfers/etc. removing

**GAMBIT (FLUENT Inc / ANSYS Inc):**  
healing of gaps and overlapping, surface wrapping

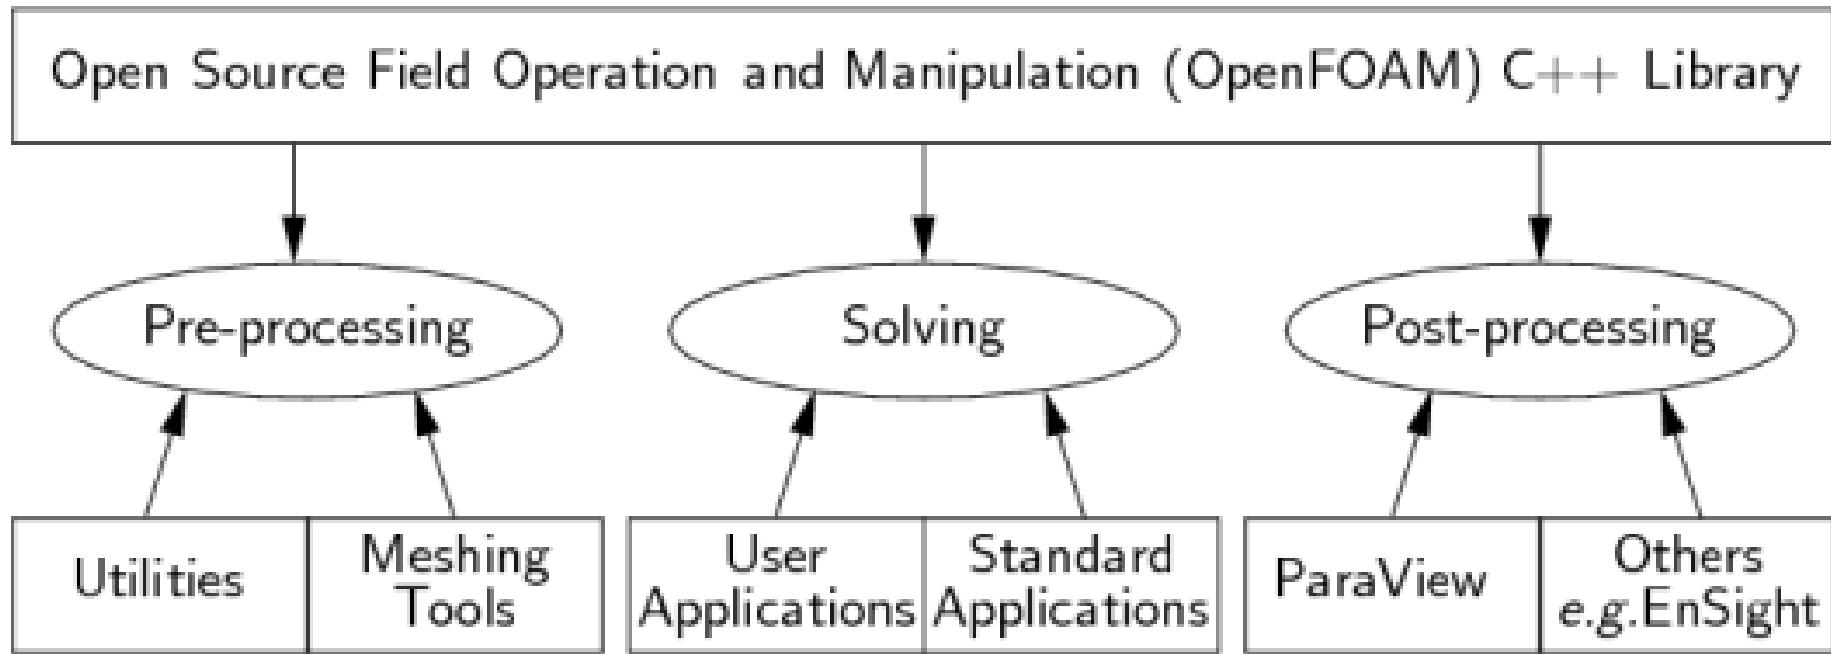

# Initial design space cleanup using conventional CAE preprocessors

---

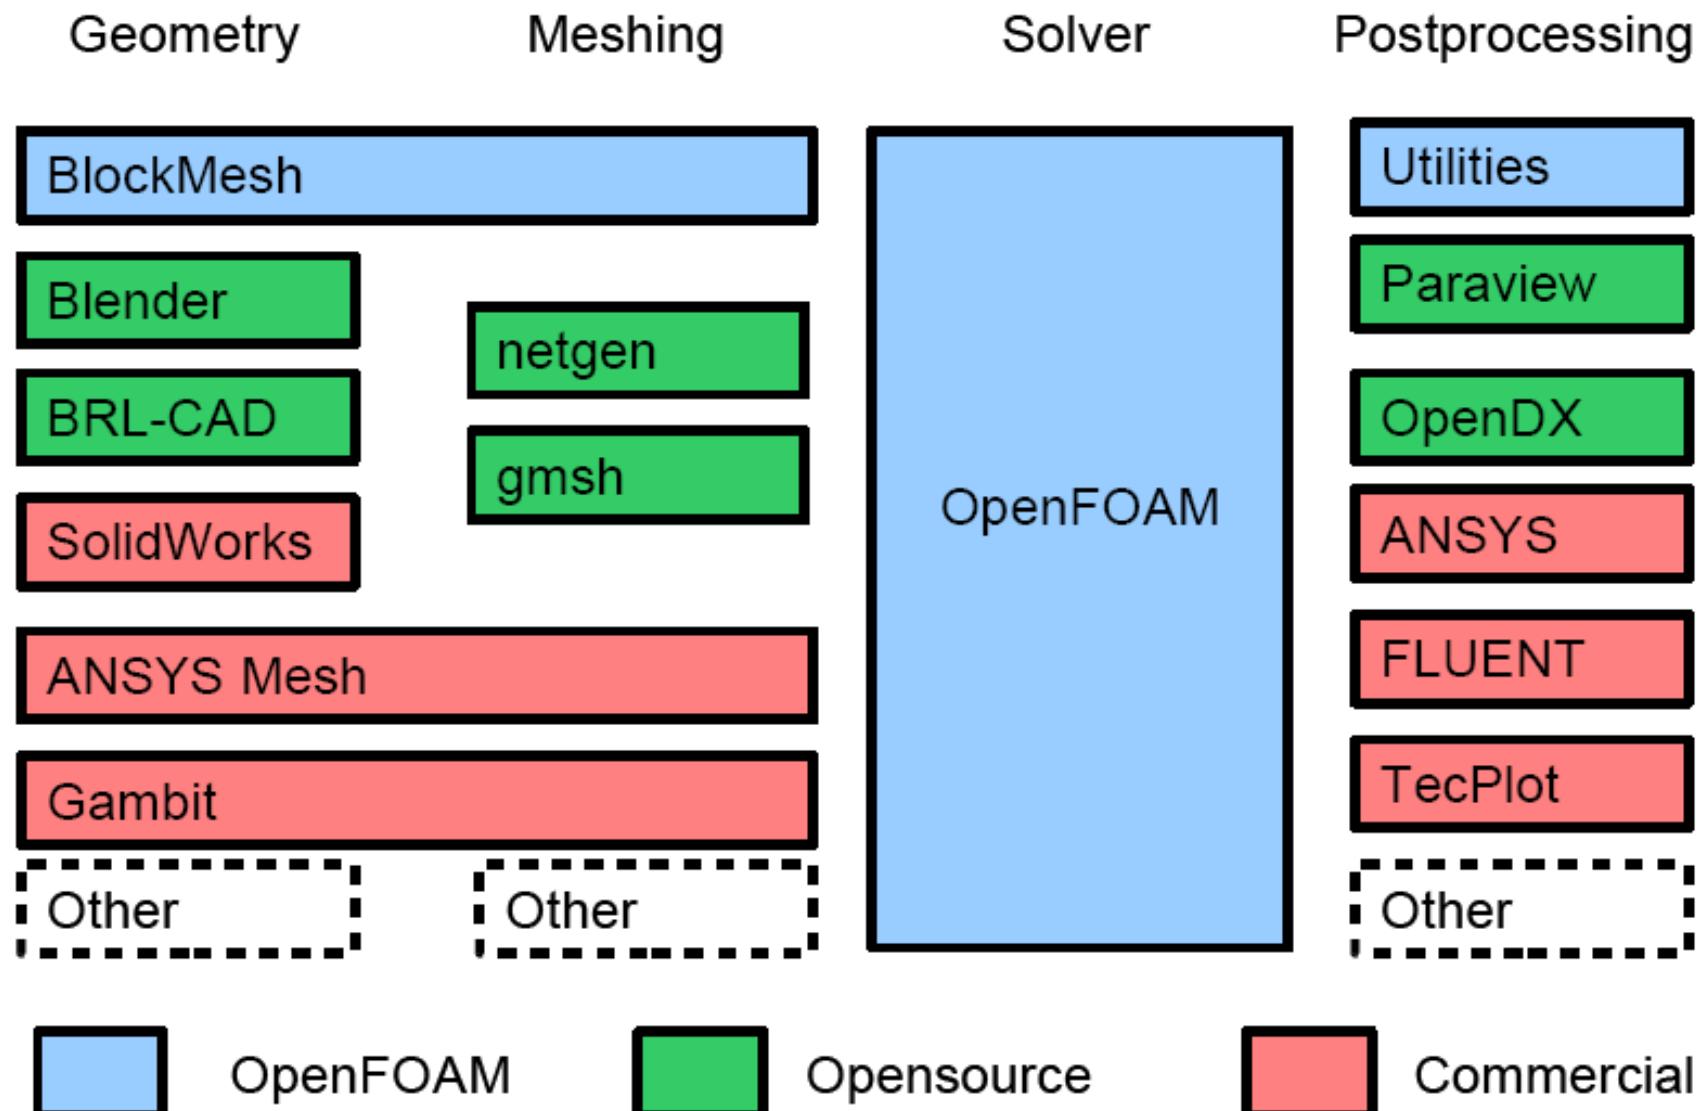

**ANSYS ICEM CFD (ANSYS Inc):**  
healing of gaps and overlapping,  
surface wrapping, semi-automatic holes/chamfers/etc.  
removing

# Interface Preprocessing→optimisation module (OpenFOAM)

# Interface Preprocessing → optimisation module (OpenFOAM)

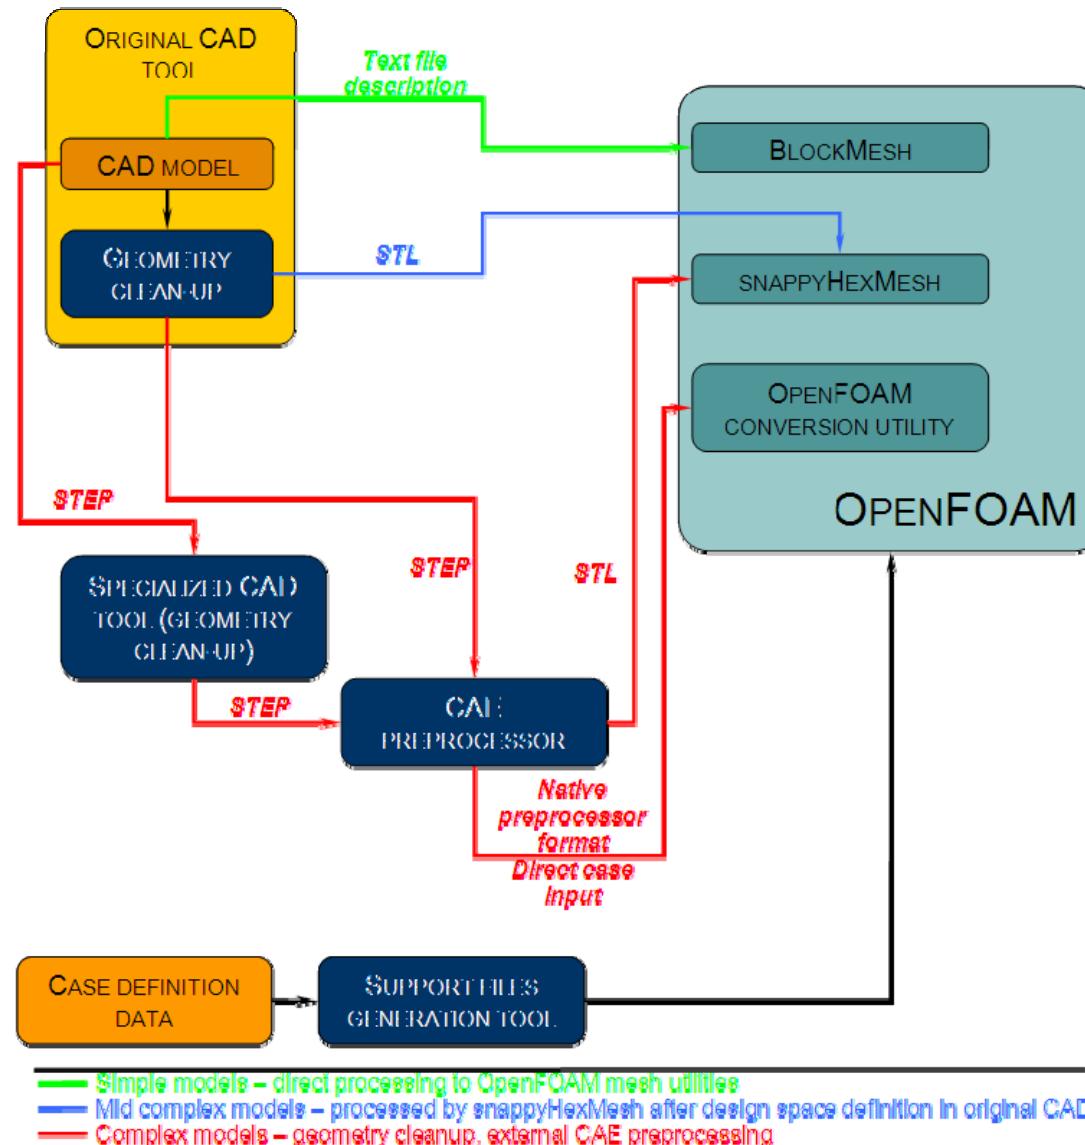

# Approaches for CFD optimisation module input

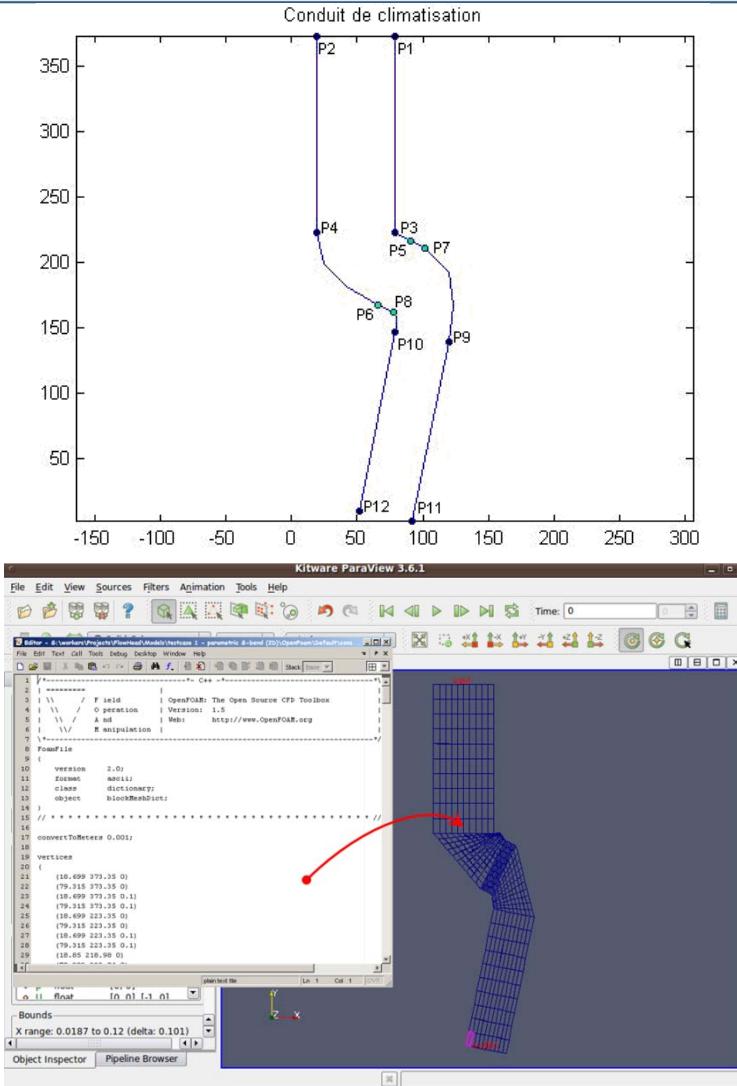

---

Type	CAD input	Used utility	Notes
Using OpenFOAM utilities	STL, Text description	BlockMesh snappyHexMesh	Good application for simple geometry; Requires CAD or CAE tool for complex geometry preparation
Using Opensource utilities	All exchange formats (STL, STEP, IGES, etc.)	Blender BRL-CAD Netgen Gmsh	Open source tools are used; 4 stages modeling – geometry export from original CAD system, geometry preparation in CAD open source utility, mesh generation and export to OpenFOAM
Using Commercial applications	STEP, IGES, etc.)	STAR-CD ANSYS / Fluent Gambit ANSA .....	Simpler data processing - export from original CAD system, geometry/mesh preprocessing in CAE software, import in OpenFOAM Direct OpenFOAM case definition (ANSA)
Combined approach	STEP, STL	ANSA STAR-Design BlockMesh snappyHexMesh	Flexible approach, involving geometry data preparation in original CAD system, surface mesh generation in commercial preprocessor (ANSA or STAR-Design), import in OpenFOAM and volume meshing

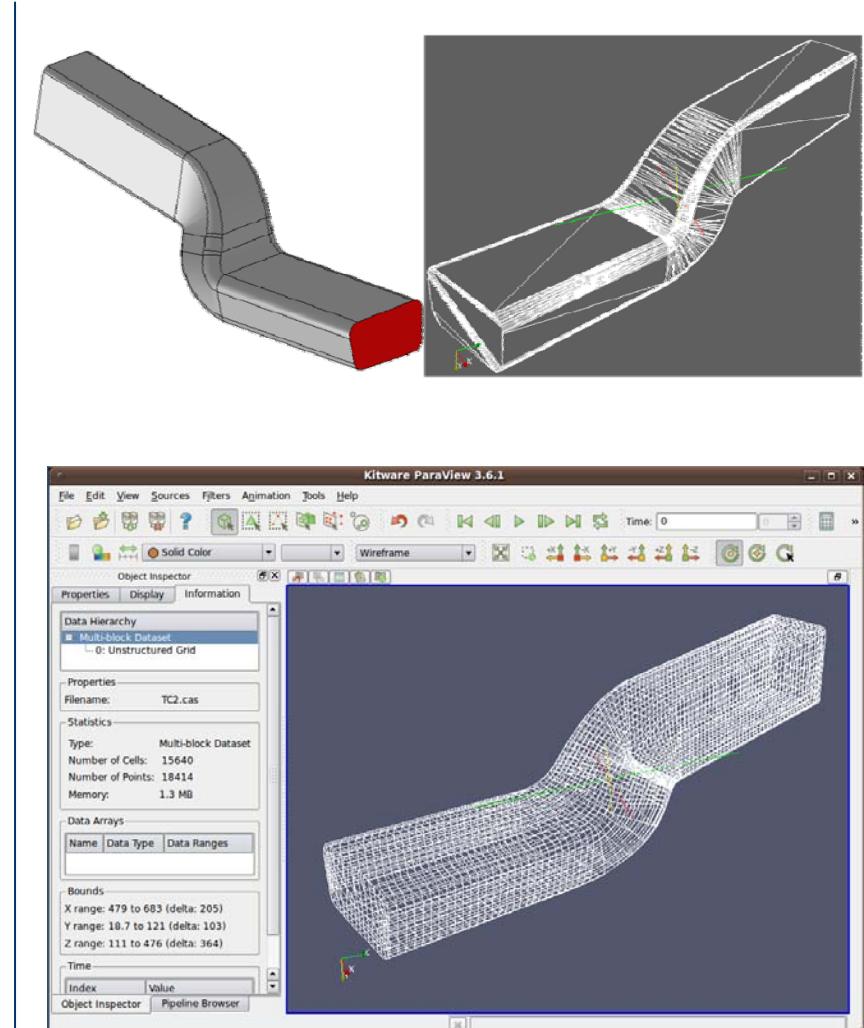

# Combined approach for data interfaces

# Interface to optimisation module – Demonstration cases

# Airduct - 2D

Airduct – 3D
